

45 Days Until Year End

It always seems that things speed up at the end of the year. Businesses get busy and complete projects. Don't forget to take into account the financial world and how it affects your cash flow and profits. We like to remind clients to focus on the following:

Watch Congress

What is Congress talking about? They still have many bills to pass yet to extend depreciation laws, and certain credits. Will we be able to deduct the cost of new 2015 assets purchased or will we only be able to deduct the first \$25k of new assets?

Watch Your Numbers

Do you know where your numbers are falling into place for 2015? Can you run an accurate profit and loss statement for 2015? What does it tell you about 2015? Can you compare your results to 2014 and make sense of any variations?

Watch Taxes

What kind of tax might you owe for 2015? If your profits are higher than 2014, are you prepared to set aside the extra cash for 2015 taxes? Are there new deductions that you should plan on to reduce your taxes? Have you planned to maximize Congresses two favorite deductions; asset write-offs and profit sharing plan contributions?

Lots of questions and not much time. Contact us today for a specialized conversation about your 2015 business results.
